Hi, Aryan here from digitalshift

Please read the below content carefully, if you are interested
Thanks for applying to digitalshift private limited internship

We got an amazing response for the internship, more than 700 applications but we need only 1 to 2 candidates for the internship

So to filter out candidates we have a small assignment set, this will test the dedication, interest and the problem solving skill in real world

Our company
We are a digital marketing agency startup that have helped 100s of businesses in past 2 years across the world in growing their business. But to scale our business further we are making a marketing software

But we face one major challenge, getting data from instagram

We need to get the following data
Followers
Following
Comments
Likes

Its best if you use graph api to extract that data, but any type of workaround will work too, given that the ig do not ban our ip address for data extraction

You need to have backend skills as well as flutter skills
You need to display this data on the flutter app
The data will be refreshed every day automatically in the backend

As well as you need to have exceptional flutter design and development skills

What you will get from our company

1. Stipend as mentioned
2. Chance to be part of a founding team, if our software does great
3. Play an integral part in product development
4. Hands on experience, learn and apply new concepts on the go
5. Certificate and letter of recommendation

We would be waiting for the assignment

The time limit for this is 3 days
